

FY26 STRATEGY REVIEW

Building the *next* chapter of Acme.

Annual business review · Board &
leadership session

WHAT WE'LL COVER

Today's agenda.

Where we stand

01

Growth, retention, and the headline numbers for FY25

What's working

02

The bets that paid off and the customers driving them

Where we're going

03

FY26 priorities, roadmap, and the investment case

THE HEADLINE

42 %

Year-over-year revenue growth — our fourth consecutive year above the 30% durable-growth threshold the board set in FY22.

The business at a glance.

\$128M

Annual recurring revenue

134%

Net revenue retention

3,900

Active enterprise accounts

Three pillars hold up FY26.

Land durable revenue

Shift the mix toward multi-year enterprise commitments and reduce reliance on month-to-month plans.

Deepen the platform

Turn point features into an integrated platform customers standardize on, not just adopt.

Operate with discipline

Hold spend growth below revenue growth and expand operating margin every quarter.

Three bets that paid off.

Self-serve onboarding

Cut time-to-first-value from 14 days to under 2, lifting trial-to-paid conversion by 11 points.

Usage-based pricing

Aligned cost with value; expansion revenue now outpaces new-logo revenue two to one.

Partner ecosystem

60+ integrations turned Acme into the default hub for mid-market operations teams.

Two years, side by side.

FY24

\$90M ARR · 118% net retention · 2,600 enterprise accounts · 9-month payback.

FY25

\$128M ARR · 134% net retention · 3,900 enterprise accounts · 6-month payback.

One platform, four layers.

Customers reach Acme through web, mobile, and partner APIs. A single edge gateway handles auth, rate-limiting, and routing into our core services — billing, identity, and analytics — all backed by one data platform and wrapped in a shared observability and security mesh.

From idea to production in three steps.

Discover

Customer interviews and usage data set the quarterly bet before a line of code is written.

Build

Small teams ship behind flags weekly, validating with design partners as they go.

Scale

Graduated rollouts, SLAs, and on-call ownership take a feature from beta to GA.

The team behind FY26.

Jane Rivera

Chief Executive — owns the durable-growth thesis and the board relationship.

Marcus Chen

Chief Financial — runs the margin program and the FY26 investment case.

Priya Nair

Chief Product — leads platform depth and the applied-AI roadmap.

Diego Alvarez

Chief Technology — owns the edge migration and reliability SLAs.

From feature vendor to platform.

Before Customers bought individual features, churned when a competitor matched one, and renewed on price.

After Customers standardize on the platform, expand into new modules, and renew on the switching cost of leaving.

How we got here.

FY21 Seed launch

FY22 \$20M ARR

FY23 First enterprise
tier

FY25 \$128M ARR

TRUSTED BY

Four anchors of the ecosystem.

*The companies that win this decade
won't be the ones with the most
features — they'll be the ones
customers **can't imagine working
without.***

THE THESIS

We are early — and *the moat is widening.*

Every account we land
deepens the data, the
integrations, and the
switching cost that make the
next account easier to win.

THANK YOU

Let's build *FY26* together.

press@acme.example

Four quarters, one direction.

Each quarter compounds the last: foundation enables expansion, expansion funds scale, scale earns the room to optimize.

Four investments, ranked.

Durable growth

Concentrate sales on multi-year enterprise commitments.

Trust & security

Achieve FedRAMP and ISO 27001 to unlock regulated buyers.

Geographic reach

Open the EU region and localize for three new markets.

Applied AI

Ship copilots that turn raw usage data into customer action.

Should we move fully usage-based?

In favor

Revenue tracks value delivered, expansion is automatic, and customers never overpay for idle seats.

Against

Revenue is harder to forecast quarter to quarter, and procurement teams prefer fixed, predictable line items.
